CHAIN STRAP WRENCH

This rugged wrench combines the strength of a chain wrench with the smoothness of a strap wrench.

* This is a tool that can turn with equal ease on hardened steel shafts, thin wall tubing, steel pipe, and plastic tubing without gouging or distorting.
* It is ideal for working in tight places and can grip on any shape or material.
* The strap-lined jaw spreads grip pressure evenly around the pipe circumference, lowering the risk of marking or crushing thin-wall or coated tubulars compared with a plain chain wrench.
* The chain-and-strap combination adjusts to a wide range of diameters with a single wrench, cutting down on the number of tools needed on location.
* Compact and lightweight enough for one-handed operation in confined rig-floor spaces.
