# FALIZ PAJOUHESH PARS CO.

## F12.B3

## JAR

***It is used as part of a wireline tool string when upward impact is required.***

### *Type:*

1. Mechanical Wireline Jar: It is used to provide the ability to exert increased impact on subsurface tools by either jarring up or down. It is typically used in conjunction with hydraulic jars where the desire or need to jar may be necessary. It is often called SPANG JAR. They are composed of two interlocking links which slide very much in the same way as a slide hammer.

2. Hydraulic Wireline Jar: It is designed to give the wireline operator control over jarring intensity during wireline operations. This is accomplished through its unique body design and integral inner mandrel that allows the jar to be reset easily following each jarring cycle.

3. Knuckle Jar 4. Link Jar 5. Tubular Jar

### *Size:*

1.25" | 1.50" | 1.75" | 1.87" | 2.125" | 2.50"

No.721, phase 2, Industrial zone 2 Andimeshk Road, Ahvaz, Khuzestan
