TUBING GAUGE CUTTER

It is designed to gauge and scrape clean the I.D. of the tubing. The cutter O.D. should be selected very close to the I.D. of the tubing in which it is run. It should be used prior to running or pulling a subsurface control.

Type:

1. Tubing Gauge Cutter / Sample Collector: It is a wireline service tool that allows the operator to collect and retain samples of scale or wax attached to the tubing wall. A downward movement of the assembly will lift the gauge cutter ring and any debris will fall into the collection chamber below. When the gauge cutter / sample collector is picked up, the gauge cutter ring will close and cover the chamber, retaining the samples for analysis on surface.

2. Tubing Gauge Cutter Ring Mandrel: It is a wireline service tool designed to operate as a standard gauge cutter, but with the added facility of being able to interchange different size gauge cutters on a standard carrier.

Size:

1.25"-1.50"	1.50"-2.00"	2.00"-2.50"	2.50"-3.00"	3.00"-4.00"	4.00"-5.00"	5.00"-6.00"
