F2.B
String Basket Tools

Description

Standard wireline toolstring accessories — including stems, roller stems, jars, knuckle joints and rope sockets — that make up the working "basket" of a slickline or braided-line string.

Machined from high-strength alloy steel to standard API thread and connection profiles for interchangeability across toolstrings.

Applications

- Slickline toolstring assembly
- Downhole jarring and weight control
- Well intervention and maintenance runs

Features:

- High-strength alloy steel construction
- Standard API connection profiles
- Precision-machined threads
- Corrosion-resistant coating
- Interchangeable modular components
- Static and dynamically balanced
- Minimum maintenance design

Options:

- Custom length and weight
- Alternative thread/connection profiles
- Custom bore and hub fitting
- Alternative materials on request

Build Notes:

Dimensions, ratings and materials are configured per project. Contact us with your application details for a tailored specification sheet.
